USC School of Dentistry
Friday - Sunday, June 27 - 29, 2008
8:00 a.m. - 5:00 p.m.
Lee Culp, CDT
Mr. Culp is a leading resource/inventor for many of the materials, products and techniques used in dentistry today and holds numerous patents for his ideas and products. He is the editor in chief of Spectrum, and is also on the editorial board of Signature, Signature International, Practical Periodontics and Aesthetic Dentistry, Inside Dentistry, and Compendium. His professional memberships include the American College of Prosthodontics, the American Equilibration Society and the American Academy of Cosmetic Dentistry. He is the founder of Mosaic Studios and the Institute for Oral Art and Design.

Yoshihiro Goto, DDS, MSD
Clinical Assistant Professor of Advanced Prosthodontics at USC. He has received his dental degree from Nihon University in Tokyo Japan as well as USC. He has earned his Master Degree and Certificate of Advanced Training in Prosthodontics at the University of Washington. Dr. Goto has published multiple articles in national and international dental journals. He has presented nationally and internationally focusing on implants and esthetic rehabilitation. Dr. Goto also maintains a private practice limited to Implant and Prosthodontics reconstruction in Los Angeles, California.

Arnold Rosen, DDS, MBA
Dr. Rosen’s background spans all arenas of patient care, administration, and academia. His specialty from Boston University School of Graduate Dentistry and Sloan Kettering Memorial Cancer Institute was Prosthodontics and Maxillo-Facial Prosthetics and he has since added an MBA from Boston University. He has served as Director of the Dental Implant Center and Founder of the Dental Implant Fellowship Program at Tufts University. He has also worked in telemedicine and teledental technologies as a consultant to the international medical forum in Argentina, and as Co-Founder of a telemedicine company and Founder of Transcend, Inc.

Clark M. Stanford, DDS, PhD
Centennial Fund Professor in the Dows Institute for Dental Research and in the Department of Prosthodontics, University of Iowa. Dr. Stanford received his BS, DDS, Certificate in Prosthodontics and PhD in Cell Biology from the University of Iowa. He is a member of several professional organizations and serves on their governing board and committees. He is also a Fellow in the Academy of Prosthodontics. His research activities include bone and connective tissue responses to mechanical stimuli, bone mineralization and clinical studies evaluating material outcomes. Dr. Stanford maintains a clinical prosthodontic practice within the College of Dentistry.

Homayoun H. Zadeh, DDS, PhD
(Course Director)
Associate Professor, USC School of Dentistry. Dr. Zadeh is a graduate of the USC School of Dentistry. He completed the advanced clinical education in Periodontology and earned his PhD degree in Immunology from the University of Connecticut. He is a Diplomate of the American Board of Periodontology. He has an extensive publication track and serves as the editorial reviewer for several scientific journals, as well as a consultant to the NIH Center for Scientific Review. Dr. Zadeh also leads a research team, funded by the National Institute of Health, to investigate the mechanisms of periodontal diseases. Dr. Zadeh is the Director of USC Periodontal and Implant Symposium.

**Topics to be covered:**
- Prosthetic options for complex cases
- Treatment of fully-edentulous maxilla and mandible
- Treatment of patients requiring restoration of multiple teeth and implants
- Decision tree for selection of fixed versus removable restoration
- Immediate and early loading
- Diagnostic tools: CT imaging, surgical guides
- Computer-assisted planning and implant positioning
- Immediate implant placement vs. staged implant placement
- Assessment of need and sequencing of implant site-development techniques
- Implant impression techniques
- Screw-retained vs. cement-retained restorations
- Application of CAD/CAM in abutment and restoration fabrication
- Abutment selection guidelines
- Occlusal considerations and guidelines
- Provisional options and techniques
- Prosthetic complications and their management
- Dental materials used in implant restoration
- Laboratory techniques and procedures

**Hands-on workshop**
- Fabrication of full-arch immediately load provisional prosthesis

**Live patient demonstration**
- Full-arch computer-guided implant placement
- Implant impression techniques and bite registration
- Immediately loaded provisional prosthesis

* This course is suitable for clinicians with intermediate or advanced experience in implant dentistry

**Synopsis**
A variety of clinical scenarios may present, requiring complex prosthetic restoration. A key to success is careful planning and simplification of therapy, based on sound principles. A wide array of restorative options are available today. Selection of the appropriate prosthesis requires consideration of the patient’s anatomy, quantity and quality of available hard and soft tissues, the need for augmentation surgery, esthetic requirements, occlusal scheme and patient’s desires. The objective of this course is to review the fundamentals for prosthetic restoration of implant patients. An evidence-base approach will be used to provide treatment options with high degree of predictability. Practical solutions to common prosthetic problems will be provided.

**This course is recommended for:**
- Restorative dentists and surgical specialists who would like to acquire a more in-depth and comprehensive understanding, as well as practical skills for management of patients with complex prosthetic treatment plans.
- Allied professionals (laboratory technicians, dental hygienists and dental assistants) who participate as members of the implant therapy team and would like to be more effective in their functions by enhancing their fundamental and practical knowledge.
