Compliments of Implant Therapy
The number of claims related to implant complications has increased significantly over the last few years. In addition, complications associated with implant surgery can have a devastating effect on the final outcome of treatment. This lecture course will focus on how to identify and avoid potential complications before they arise and how to manage many of the common complications that can occur with implant therapy. Emphasis will be given to medico-legal implications, patient risk assessment, classifications of complications, and proper treatment planning principles. At the end of this course, participants will have a better understanding of the prevention and management of complications related to implant therapy.

Upon completion of this course participants should be able to:

- Perform treatment plan effectively to minimize the incidence of future complications
- Assess pre-operative risk
- Manage the most common implant related complications
- Avoid and manage prosthetic complications
- Avoid esthetic complications
- Assess the role implant position plays in restorative complications
- Avoid and minimize risks associated with implant surgery
- Manage complications associated with bone graft procedures and sinus augmentation (graft infection and failure, sinusitis, oral-antral communication, and sinus fistula)
- Manage peri-implantitis
- Manage nerve injury associated with implant surgery
- Manage failed implants and remove implants with minimal bone trauma
- Assess medico-legal implications of treatment failures
- Discuss case settlement and outcomes

University of Southern California Herman Ostrow School of Dentistry is an ADA CERP Recognized Provider. ADA CERP is a service of the American Dental Association to assist dental professionals in identifying quality providers of continuing dental education. ADA CERP does not approve or endorse individual courses or instructors, nor does it imply acceptance of credit hours by boards of dentistry.

Participants are cautioned about the potential risks of using limited knowledge when integrating new techniques into your practice.
