Los Angeles, CA 90089-0641
Phone: 213.821.2127
Fax: 213.740.3973
E-mail: cedental@usc.edu
Website: www.uscdentalce.org

Registration Fees

Before August 1, 2010
Dentist: Module IA: $285
Module IA & IB: $875
Auxiliary: Module IA: $115
Module IA & IB: $595

After August 1, 2010
Dentist: Module IA: $325
Module IA & IB: $945
Auxiliary: Module IA: $195
Module IA & IB: $645

Refunds are granted only if a written cancellation notification is received at least 21 days before the course. 50% of the tuition minus processing fee will be refunded if cancellation occurs within 14 days before the course. No refund is granted after that. A $60 fee is withheld for processing. For additional registrations, xerox this form and send.

Fees include course material, continental breakfast and refreshments during breaks.

Esthetic Management of Extraction Sites

* Life-Long Tradition and Excellence *
Implant site preservation and development is the concept of maintaining the volume and architecture of both the soft and hard tissues. It is critical to minimize tissue loss during extraction to conserve the natural tissue architecture for future implant placement. Tissues should be preserved and maintained in their original forms as much as possible from the time of tooth extraction to the placement of restoration. This concept is crucial to ensure tissue healing, patient comfort, esthetics and functionality of the final implant restoration. This course will highlight several techniques that facilitate a more esthetic, functional and predictable result in implant dentistry, starting with extraction. Discussion will focus on some of the most commonly asked questions in implant dentistry, such as should grafting be performed after tooth extraction? which is the best graft material to use? what type of interim provisional restorations to use in order to minimize tissue loss? and decisions regarding immediate implant placement versus delayed implant placement. This course is designed for the novice and advanced clinician and is the first in our series on implant site development and bone grafting. The hands-on portion will focus on minimally invasive extraction and grafting techniques and participants will practice on human cadavers.

**SYNOPSIS**

- To review the minimally invasive tooth removal techniques and instrumentation
  - Remove broken and difficult teeth with minimal flap
  - Various incision and flap designs for optimal end results
- To describe the role of socket grafting
  - Literature and indications for grafting
  - What to look for in choosing a graft material
  - Technique
- To evaluate histomorphometric analysis of different graft materials
- To discuss the management of extraction sites with facial bony defects - “socket repair”
- To know how to manage the post-extraction site in order to minimize hard and soft tissue loss
- To understand the concept of Bone-driven Tissue Regeneration (BTR) and Bone-driven Tissue Transformation (BTT)
- To understand the pros and cons of immediate versus delayed implant placement
- To describe minimally invasive bone grafting techniques for the compromised implant site development

**COURSE OBJECTIVES**

**Before**

**After**

**Atraumatic Extraction**

**Graft Socket Defects**

**Immediate versus Delayed Implant Placement**

**Socket Repair**

**STUDENT FEEDBACK**

- “Fantastic course! The instructors were fabulous!”
- “Excellent - Thank you very much. This is a great course.”
- “Nicely organized and well presented. Very useful!”
- “Dr. Le loves to teach and is willing to review in detail for each student.”
- “Encouraging!”
