Synopsis
This course will present actual cases illustrating the forensic dental techniques used in the investigation of crimes, including homicide, rape, child abuse and battery. It will also cover mass fatality incidents, such as Hurricane Katrina and the World Trade Center disaster. Consideration will be given to the controversial use of bitemark evidence, and to dentistry’s newly proposed role in the response to bioterrorism and the provision of emergency medical care. The extent to which members of the private practice dental team can become involved in this fascinating field, and the limitations of this involvement will be candidly discussed.

Upon completion of this course participants should:

- Gain familiarity with forensic dentistry procedures
- Know the possibilities and limitations involved in entering this field
- Become aware of dentistry’s possible role in the response to bioterrorism and provision of emergency medical care
