Basic Protocols in Bone and Soft Tissue Grafting in Implant Therapy

Lecture & Hands-On Workshop
Herman Ostrow School of Dentistry of USC
Friday, May 1, 2015, 8:00 a.m. - 5:00 p.m.
Saturday, May 2, 2015, 8:00 a.m. - 4:00 p.m.
Sunday, May 3, 2015, 8:00 a.m. - 1:00 p.m.
Online registration available at www.uscdentalce.org

Upcoming Courses

IMPLANT THERAPY IN THE ESTHETIC ZONE
Friday - Sunday, February 27 - March 1, 2015

THE SECRETS OF GUIDED BONE REGENERATION IN IMPLANT DENTISTRY: HANDS-ON WORKSHOP
Saturday, March 7, 2015

USC RUTH RAGLAND 29TH DENTAL HYGIENE SYMPOSIUM
Saturday, March 14, 2015

ESTHETIC FULL-MOUTH IMPLANT RECONSTRUCTION: FROM TREATMENT PLANNING TO FIXED RESTORATION
Module I - Lecture: Friday, March 20, 2015
Module II - Lecture: Saturday, March 21, 2015

OBSERVING SLEEP APNEA, SNORING AND DENTAL ADVANCEMENT
Friday - Saturday, March 27-28, 2015

LEARNING IMPLANT DENTISTRY FOR THE RESTORATIVE DENTIST
Part I: Saturday, March 28, 2015
Part II: Saturday, May 9, 2015

INTERMEDIATE DENTAL IMPLANT RESTORATIVE PRINCIPLES, PROCEDURES AND PROTOCOLS
Part I - Lecture: Friday, April 3, 2015
Part II - Lecture, Demonstration & Hands-On: Saturday, April 4, 2015

COMMON ORAL LESIONS: SOFT AND HARD TISSUE DISEASES
Friday, April 10, 2015

SURGICAL AND PERIODONTAL PERSPECTIVES ON IMPLANT TREATMENT PLANNING
Friday, April 17, 2015

DELTA DENTAL: MULTIDISCIPLINARY APPROACHES TO ACHIEVE ORAL HEALTH, FUNCTION AND ESTHETICS
Friday, April 24, 2015

COMPLICATIONS OF IMPLANT DENTISTRY
Saturday, May 16, 2015

3 + 1 Free CE Program
The More You Learn, The More You Earn!
Take any 3 CE courses between January and December 2015 and receive another course for FREE.

Registration Fees
Before April 15, 2015
Dentist: $1,995
Auxiliary: $1,695
After April 15, 2015
Dentist: $2,195
Auxiliary: $1,865

Fees include course material, continental breakfast, lunch, and refreshments during breaks.

Refunds are granted only if a written cancellation notification is received at least 21 days before the course. 50% of the tuition minus processing fee will be refunded if cancellation occurs within 14 days before the course. No refund is granted afterwards. A $75 fee is withheld for processing. For additional registrations, xerox this form and send.

Homayoun H. Zadeh, DDS, PhD

Dr. Zadeh is Associate Professor and Director of the post-doctoral periodontontology program at the University of Southern California and a Diplomate of the American Board of Periodontology. Dr. Zadeh directs the Laboratory for Immunoregulation and Tissue Engineering (LITE) at USC, dedicated to studying basic mechanisms to regulate bone and tissue regeneration/destruction under health/disease states, as well as conducting clinical trials of dental implant outcomes. His clinical research interests involve studies on minimally-invasive surgery and tissue engineering. He maintains a part-time private practice limited to Periodontology and Implants in Southern California.

Thomas Han, DDS

Dr. Han received his DDS degree in 1982, Certified in Periodontics in 1984, and MS degree in Oral Biology in 1985 from the UCLA School of Dentistry. He is a Diplomate of the American Board of Periodontology, the American Board of Oral Implantology/Implant Dentistry, and the International Congress of Oral Implantology. He currently serves as Clinical Professor of Herman Ostrow School of Dentistry of USC, Department of Periodontology. He is a fellow of the American College of Dentist, and a member of the American Academy of Esthetic Dentistry. He is listed as one of the recommended speakers by the American Academy of Periodontology in the field of periodontal plastic surgery, and he has lectured widely both in the United States and abroad on the topic of esthetics in implant dentistry.

Many sites planned for implant placement require at least some degree of bone and/or soft tissue augmentation to achieve esthetic and functional reconstruction of patients. Two keys for achieving predictable outcomes in tissue regeneration, include 1) understanding of the basic biologic principles, 2) implementing protocols which have been previously tested in scientific studies. This intense 3-day course is presented by two world-renown experts in the field of tissue regeneration, who derive from their vast experiences, as well as the scientific evidence to provide the most up-to-date and predictable protocols for basic bone and soft tissue augmentation. The course uses three methods to ensure in-depth learning by participants: 1) lecture, describing the biologic principles, as well as clinical case presentation; 2) live surgery to demonstrate the most pertinent protocols on patients, so that the participants have an opportunity to observe and interact during surgery; 3) model workshops to allow participants to perform soft tissue and bone augmentation on anatomically accurate models. The models utilized have been specially designed for this course for optimal learning of the steps involved in the most commonly encountered soft tissue and bone grafting procedures. The techniques presented in this course are those with the strongest scientific evidence and are likely to have the most predictable outcomes.

This course is recommended for: Restorative dentists and surgical specialists who would like to acquire a more in depth and comprehensive understanding necessary for management of patients requiring complex prosthetic restoration.

Topics to be discussed:
- Selection and sequencing of implant site development techniques
- Flap design principles
- Suturing material and techniques
- Selection of bone graft material
- Selection of barrier membranes
- Sinus augmentation rationale and techniques
- Lateral and crestal sinus augmentation
- 3D horizontal and vertical ridge augmentation
- Guided bone regeneration
- Piezosurgery techniques
- Methods of harvesting autogenous bone
- Soft tissue augmentation around implants
- VISTA for ridge augmentation in the esthetic zone
- Selection of material for socket tissue augmentation
- Diagnostic tools: CT and cone beam imaging, interactive imaging and scan prosthesis
- Computer-assisted implant positioning
- Minimally invasive tooth extraction
- Ridge preservation and augmentation

Hands-On Model Workshop
- Lateral window and crestal osteotomy sinus augmentation
- Flap design and suturing
- Harvesting autogenous particulate bone
- Guided bone regeneration (GBR)
- Soft tissue augmentation around implants (VISTA)
- Harvesting soft tissue from palate and tuberosity
- Piezosurgery techniques

Live Surgery Demonstration
- Lateral window and crestal osteotomy sinus augmentation
- Implant placement
- Vestibular Incision Subperiosteal Tunnel Access (VISTA) for soft tissue augmentation
- Guided bone regeneration (GBR)

* This course is suitable for clinicians with intermediate or advanced experience in implant dentistry.

All speakers must disclose to the audience any proprietary, financial or other personal interest of any nature or kind, in any product, service, source and/or company, or in any firm beneficially associated therewith that will be discussed or considered during their presentation. The Herman Ostrow School of Dentistry of USC does not view the existence of these interests or uses as implying bias or decreasing the value to participants. The Herman Ostrow School of Dentistry of USC, along with ADA CERP, feels that this disclosure is important for the participants to form their own judgment about each presentation.
