☐ MasterCard ☐ Visa ☐ Check Enclosed
Card Number ___________________________
Expiration Date ___________________________
Total Payment $ ___________________________

Names of Other Enrollees: ___________________________

20 Hours of Continuing Education

Registration Fees
Before March 1, 2008
Dentist: $1,695 (D1) / $995 (D2)
Auxiliary: $895 (D1) / $495 (D2)

After March 1, 2008
Dentist: $1,895 (D1) / $1,195 (D2)
Auxiliary: $995 (D1) / $595 (D2)

Fees include course material, continental breakfast, lunch and refreshments during breaks

Please make checks payable and mail to
USC School of Dentistry

Refunds are granted only if a written cancellation notification is received at least 21 days before the course. 50% of the tuition minus processing fee will be refunded if cancellation occurs within 14 days before this course. No refund is granted afterwards. A $60 fee is withheld for processing. For additional registrations, xerox this form and send.
The success of dental implants depends on their placement in bone of adequate density and volume in order to achieve primary stability. However, there is usually at least some degree of atrophy in most implant sites due to post-extraction remodeling or because of pathologic conditions. There has been a gradual shift in paradigm from merely achieving successful osseointegration to achieving final restorative outcomes that mimic natural dentition and their surrounding oral tissues. These objectives have been materialized by advancements in surgical techniques, as well as availability of biomaterials to enable predictable regeneration of oral hard and soft tissues. This course will review the biological fundamentals, as well as the surgical techniques involved in treating patients with compromised hard and soft tissues.

**Topics to be covered:**

- Reconstruction of prosthetically and anatomically compromised patients
- Selection and sequencing of implant site development techniques
- Rationale and techniques for sinus augmentation
- Horizontal ridge augmentation
- Vertical ridge augmentation
- Distraction Osteogenesis
- Mandibular block autografting
- Onlay block grafts rationale and techniques
- Guided bone regeneration
- Soft tissue augmentation around implants
- Diagnostic tools: CT imaging, surgical guide
- Computer-aided implant placement
- Orthodontic therapy for site development
- Socket preservation and augmentation
- Immediate implant placement vs. staged implant placement
- Minimally invasive implant placement
- Immediate vs. delayed implant loading
- Piezosurgery

**Live Surgery Demonstration**

- Lateral-window sinus augmentation
- Donor graft harvesting from ramus and symphysis
- Recipient site preparation and block graft fixation
- Guided bone regeneration

**Hands-On Cadaver Workshop**

- Lateral-window sinus augmentation
- Donor graft harvesting from ramus and symphysis
- Recipient site preparation and block graft fixation
- Guided bone regeneration

**Hands-On Model Workshop**

- Lateral-window sinus augmentation
- Donor graft harvesting from ramus and symphysis
- Recipient site preparation and block graft fixation
- Guided bone regeneration

**This course is recommended for:**

- Surgical specialists and restorative dentists who would like to acquire a more in-depth and comprehensive understanding, as well as practical skills to achieve predictable treatment outcome in patients with compromised bone or soft tissues
- Allied professionals (laboratory technicians, dental hygienists and dental assistants) who participate as members of the implant therapy team and would like to be more effective in their functions by enhancing their fundamental and practical knowledge

* This course is suitable for clinicians with intermediate or advanced experience in implant dentistry.
