★ Life-Long Tradition and Excellence ★
SYNOPSIS

Successful implant osseointegration is well documented over the past forty years. This course will educate the dentist in the most predictable manner to diagnose and treat patients presenting missing teeth with dental implants and their restoration. Aspects of treatment planning will be discussed and conventional dentistry vs implant dentistry will be compared. The participant will become knowledgeable about CT scan, radiographic and surgical guides, implant components, implant provisional restorations and screw retained and cement retained restoration. This course is designed for those that wish to begin implant treatment for their patients and those that would like a better basic understanding of dental implants.

Topics to be discussed:

- Implant Introduction - history and types
- CT Scans - reading and identifying structures and position of implants
- Radiographic/Surgical Guides
- Implant Components - screws, screw drivers and abutments
- Implant position
- Treatment Planning for simple implant restorations
- Implant provisional restorations
- Soft tissue management for implant restorations
- Cement vs screw retained restorations

Upon Completion Participants Should Be Able To:

- Understand and identify implant components with parts identification
- Discuss optimal implant position
- Understand use and purpose of radiographic and surgical guide
- Become familiar with treatment planning sequence for uncomplicated implant
- Understand the financial implications of implants vs conventional dentistry
- Manipulate soft tissue around implant for best gingival architecture
- Know the sequence for delivering the uncomplicated implant restoration

REGISTRATION FEES

Before April 1, 2013
Dentist $245
Auxiliary $195

After April 1, 2013
Dentist $345
Auxiliary $275
