Molar endodontics often present challenges to the clinician. These may include difficulty in isolation and access, negotiation of curved and narrow root canals, calcified canals, difficulty in canal obturation, and managing anatomical variations. However, many advances in technology, materials and equipment have made it possible today to efficiently perform successful molar endodontic treatment with more precision and predictable results.

This two-day course includes lectures and hands-on workshops and is specially designed for General Dentists who wish to advance their clinical skills when performing molar endodontics. Participants will learn how to perform efficient endodontic access, clean and shape the root canal system and finally obturate in a predictable manner. Participants will also perform endodontic treatment from start to finish in real maxillary and mandibular molar teeth. Without a doubt, this course will help you master molar endodontics.

**SYNOPSIS**

**Topics to be discussed:**
- Endodontic anatomy and morphology of molar teeth
- Preparation for endodontic treatment
- Modern principles of endodontic access
- Canal length determination - radiographic and electronic
- Cleaning and shaping of molar root canals
- Nickel Titanium rotary instrumentation
- Procedural errors and their prevention
- Root canal obturation

**Upon Completion of the Course Participants Should Be Able To:**
- Enhance their knowledge of the clinical concepts of molar endodontics
- Successfully treat both upper and lower molar teeth
- Apply system-based approaches for treating endodontic cases
- Approach molar endodontic cases with more confidence and enjoy more predictable results
- Know when and what to refer
