MINIMALLY INVASIVE ADHESIVE AND ESTHETIC DENTISTRY: A REVIEW OF AVAILABLE TREATMENT OPTIONS & MATERIALS
Saturday, April 6, 2019
Molar endodontics often present challenges to the clinician. These may include difficulty in isolation and access, negotiation of curved and narrow root canals, difficulty in canal obturation, and managing anatomical variations. However, today many advances in technology, materials and equipment have made it possible to efficiently perform successful molar endodontic treatment with more precision and predictable results.

This two-day intensive course includes lectures and hands-on workshops and is specially designed for General Dentists who wish to advance their clinical skills when performing molar endodontics. Participants will learn how to perform efficient endodontic access, clean and shape the root canal system and finally obturate in a predictable manner. Participants will also perform endodontic treatment from start to finish in maxillary and mandibular molar teeth. Without a doubt, this course will help you master molar endodontics.

This course is recommended for doctors at any level who are interested in improving their clinical skills and safely perform endodontic treatment in molar teeth.
