USC School of Dentistry is an ADA CERP and ASD recognized provider.
Know the anatomic and physiologic differences between the child and adult

Describe the indications, contraindications, advantages and disadvantages of inhalation sedation with N₂O-0₂ in the pediatric patient

Discuss the appropriate use of N₂O-0₂ in combination with oral sedation

Know the indications, contraindications, advantages and disadvantages of oral conscious sedation in the pediatric patient

Name 5 orally-administered CNS-depressants recommended for use in pediatric OCS

Describe the pharmacologic actions of these 5 drugs on the CNS, respiratory system, and cardiovascular system

Outline the protocol for a pediatric OCS appointment

Determine the maximum recommended dosage of local anesthetic agents in pediatric dental patients

Describe the monitors employed during pediatric OCS

Describe the record keeping required for pediatric OCS

List the criteria for discharge from the dental office of the pediatric patient receiving OCS

Diagnose and manage oversedation and the unconscious patient

Describe and understand the use of each of the emergency drugs and supplies mandated by the Dental Board of California

Use oral conscious sedation effectively and safely in the pediatric dental patient.

Upon completion of this course participants should:

- Know the anatomic and physiologic differences between the child and adult
- Describe the indications, contraindications, advantages and disadvantages of inhalation sedation with N₂O-0₂ in the pediatric patient
- Discuss the appropriate use of N₂O-0₂ in combination with oral sedation
- Know the indications, contraindications, advantages and disadvantages of oral conscious sedation in the pediatric patient
- Name 5 orally-administered CNS-depressants recommended for use in pediatric OCS
- Describe the pharmacologic actions of these 5 drugs on the CNS, respiratory system, and cardiovascular system
- Outline the protocol for a pediatric OCS appointment
- Determine the maximum recommended dosage of local anesthetic agents in pediatric dental patients
- Describe the monitors employed during pediatric OCS
- Describe the record keeping required for pediatric OCS
- List the criteria for discharge from the dental office of the pediatric patient receiving OCS
- Diagnose and manage oversedation and the unconscious patient
- Describe and understand the use of each of the emergency drugs and supplies mandated by the Dental Board of California
- Use oral conscious sedation effectively and safely in the pediatric dental patient.

The focus of this course is sedation of the pediatric patient receiving dental care. The purpose is to prepare the participant to deliver safe and effective enteral (oral) conscious sedation to the patient under the age of 13 years. This course is designed to meet requirements for a pediatric enteral conscious sedation (OCS) permit in California and most other states.

Major topics to be discussed during the three days of the course include: the development of guidelines for pediatric OCS, physiology and psychology of the child, sedation techniques in children, including N₂O-0₂, intranasal, intravenous and general anesthesia, oral conscious sedation including pharmacology and protocols, monitoring and record keeping, physical evaluation, medically compromised and special needs patients, and management of unintended consequences (sedation failures and oversedation). Issues of sedation in adult patients will also be discussed.

* All doctors enrolling in this course are REQUIRED to become Pediatric Advanced Life Support (PALS) providers. The PALS course will be presented on Saturday and Sunday, November 10 - 11, 2007. Certification will be provided by Coleman Education Opportunities (CEO).
