Registration Fees

Before July 15, 2008
Dentist: Module IA: $225 Module IA & IB: $825
Auxiliary: Module IA: $115 Module IA & IB: $595

After July 15, 2008
Dentist: Module IA: $275 Module IA & IB: $895
Auxiliary: Module IA: $155 Module IA & IB: $645

Atraumatic Extraction and Minimally Invasive Implant Site Development

A Lecture & Hands-On Workshop

USC School of Dentistry is an ADA CERP and AGD recognized provider.

Refunds are granted only if a written cancellation notification is received at least 14 days before the course. 50% of the tuition minus processing fee will be refunded if cancellation occurs within 14 days before the course. No refund is granted afterwards. A $60 fee is withheld for processing. For additional registrations, xerox this form and send.

Fees include course material, continental breakfast, lunch, and refreshments during breaks.

Atraumatic Extraction and Minimally Invasive Implant Site Development

A Lecture & Hands-On Workshop

USC School of Dentistry Saturday, August 23, 2008
Module IA - Lecture: 8:00 a.m. - 3:00 p.m.
Module IB - Hands-On Workshop: 3:00 p.m. - 6:00 p.m.
Implant site preservation and development is the concept of maintaining the volume and architecture of both the soft and hard tissues. It is critical to minimize tissue loss during extraction to maintain the natural tissue architecture for future implant placement. Tissues should be preserved and maintained in their original forms as much as possible from the time of tooth extraction to the placement of restoration. This concept is crucial to ensure tissue healing, patient comfort, esthetics and functionality of the final implant restoration. This course will highlight several techniques that facilitate a more esthetic, functional and predictable result in implant dentistry, starting with extraction. Discussion will focus on some of the most commonly asked questions in implant dentistry, such as should grafting be performed after tooth extraction? which is the best graft material to use? what type of interim provisional restorations to use to develop the implant site? to determine histomorphometric analysis of different graft materials? to discuss the management of extraction sites with facial bony defects - “socket repair”? to discuss the management of the post-extraction site to minimize hard and soft tissue loss? to discuss various interim provisional restorations to develop the implant site? to discuss the pros and cons of immediate versus delayed implant placement? to discuss minimally invasive bone grafting techniques to develop the compromised implant site.

"Fantastic course! The instructors were fabulous!"
"Excellent - Thank you very much. This is a great course."
"Nicely organized and well presented. Very useful!"
"Dr. Le loves to teach and is willing to review in detail for each student."
"Encouraging!"

**Course Objectives**

- To review the minimally invasive tooth removal techniques and instrumentation
  - Remove soft and difficult teeth with minimal flap
  - Various incision and flap designs for optimal end results
- To describe the role of socket grafting
  - Literature and indications for grafting
  - What to look for in choosing a graft material
  - Technique
- To determine histomorphometric analysis of different graft materials
- To discuss the management of extraction sites with facial bony defects - “socket repair”
- To describe the management of the post-extraction site to minimize hard and soft tissue loss
- To discuss various interim provisional restorations to develop the implant site
- To discuss the pros and cons of immediate versus delayed implant placement
- To describe minimally invasive bone grafting techniques to develop the compromised implant site

**Testimonials**

- "Encouraging!"
- "Great! Thank you very much. This is a great course."
