∀ Life-Long Tradition and Excellence ∗
Upon Completion of the Course Participants Should Be Able To:

- Understand the neuroanatomy, neurophysiology and
  pathobiology of the trigeminal nociceptive system
- Headache disorders which mimic Temporomandibular
  Disorder (TMD) and cause orofacial pain
- Neurology for the novice
- New medications used for pain
- Examination methods for chronic pain

Topics To Be Discussed:

- Chronic orofacial pains (neuralgias, neuromas and
  neuropathies of the trigeminal nerve)
- Headache disorders which mimic Temporomandibular
  Disorder (TMD) and cause orofacial pain
- Neurology for the novice
- New medications used for pain
- Examination methods for chronic pain

This course focuses on chronic Orofacial Pain (OFP) and
headaches (e.g. Neuropathic Pain, Neurovascular Pain,
Neuralgia, Neuritis and Neuroma). It reviews underlying
mechanisms of pain induction, nerve injury and repair,
sensitization and spontaneous ectopic pain generation.
Lectures include an explanation of how various analgesic
blocks and sensory testing procedures, in combination with
historical information, produce a differential diagnosis of
neurogenous and headache pain. Lectures will also focus
on the appropriate pharmacologic, behavioral, surgical,
and physical medicine management procedures for these
conditions. Finally, real patient cases will be presented
with the goal of helping the attendee become more comfortable
in diagnosing and treating OFP disorders and providing a
new understanding of chronic pain.

This course is part of a series that are being
provided by the faculty of the USC Center for
Orofacial Pain and Oral Medicine. For specific
questions regarding this course, please contact
Dr. Clark at gtc@usc.edu. For patient referrals
please call 213-740-3410.
