General Sessions: Friday - Saturday, February 10 - 11, 2017
Dental Hygiene Forum: Saturday, February 11, 2017
Dental Hygiene Hands-On: Saturday, February 11, 2017
Cadaver Workshop (Gil & Min): Sunday, February 12, 2017
Cadaver Workshop (Vercellotti): Sunday, February 12, 2017

Refunds are granted only if a written cancellation notification is received at least 14 days before the course. 50% of the tuition minus processing fee will be refunded if cancellation occurs within 7 days before this course. No refund is granted afterwards. A $75 fee is withheld for processing. For additional registrations, xerox this form and send.
Modern dentistry is constantly undergoing rapid advances in biology, technology, biomaterials and treatment concepts with the goal of improving patients’ oral health, function and esthetics. Therefore, an interdisciplinary team approach is essential to enhance diagnosis, case selection, treatment planning and prognosis thus promoting clinical success and patient satisfaction.

This course will highlight how general practitioners and specialists from different disciplines can interact and collaborate effectively in order to return oral health, function and esthetics to patients.

A team of experts from the Herman Ostrow School of Dentistry of USC will present up-to-date interdisciplinary clinical approaches and discuss techniques to help you enhance successful outcomes of your clinical cases.

Topics to be covered:

- Conservative treatment plans and sequence for predictable esthetic and functional results by combining different treatment modalities and products.
- Simple and effective techniques to expand the use of direct composite restorations.
- Benefits of pre-restorative orthodontic treatment to preserve tooth structure.
- Pathways of infection between the dental pulp and periodontal ligament.
- Interrelationship between endodontic and periodontal diseases.
- Diagnosis and clinical decision-making for treating endodontic-periodontal cases.

- Dental implant as a foreign body.
- Periodontal tissues as compared to peri-implant tissues in health and disease.
- Diagnostic and prognostic challenges in periodontitis and peri-implant diseases.
- Replacing missing or compromised teeth.
- Interdisciplinary treatment planning for implant therapy.

**SPEAKERS**

**Dan Grauer, DDS, PhD**
Dr. Grauer is assistant professor at the University of Southern California, examiner for the American Board of Orthodontics and associate editor for the American Journal of Orthodontics and Dentofacial Orthopedics. He maintains a private practice in Century City and Beverly Hills area in Los Angeles. He is trained in dentistry and orthodontics both in Europe and the US. He holds a PhD degree in oral biology from the University of North Carolina. His research interests are applications of CBCT in orthodontics and orthognathic surgery, outcomes assessment in lingual orthodontics and interdisciplinary treatment planning.

**Kian Kar, DDS, MS**
Dr. Kar is Clinical Director of the Advanced Periodontology Program at Herman Ostrow School of Dentistry of USC and a full time faculty member. He received his dental degree, certificate in Periodontology, and Master of Science degree in Craniofacial Biology from USC. He is the recipient of the California Society of Periodontology Research Award in 1997, USC Mellon Mentorship Award in 2013, and American Academy of Periodontology Educator Award in 2013.

**Abdi Sameni, DDS, FACD**
Dr. Abdi Sameni is Clinical Associate Professor of Dentistry and a graduate of the Herman Ostrow School of Dentistry of USC. He has been a member of the USC clinical faculty since 1998. He is a former faculty of the “esthetic selective” which emphasizes a “biomimetic approach” to restorative and esthetic care. He was the original director of the USC Advanced Esthetic Dentistry Continuum for the portion relating to indirect porcelain veneers. He is the chairman and developer of the “USC International Restorative Dentistry Symposium” for the Herman Ostrow School of Dentistry of USC.

**Ilan Rotstein, DDS**
(Course Director)
Dr. Rotstein is Professor and Chair of the Division of Endodontics, Orthodontics and General Practice Residency and Associate Dean of Continuing Education at the Herman Ostrow School of Dentistry of USC. He has been Chair of the Research Committee of the International Federation of Endodontic Associations and past member of the Research and Scientific Affairs Committee of the American Association of Endodontists. Dr. Rotstein published more than 150 publications, including textbook chapters in the dental literature and has lectured extensively nationally and internationally in more than 25 countries.

**Synopsis**

Modern dentistry is constantly undergoing rapid advances in biology, technology, biomaterials and treatment concepts with the goal of improving patients’ oral health, function and esthetics. Therefore, an interdisciplinary team approach is essential to enhance diagnosis, case selection, treatment planning and prognosis thus promoting clinical success and patient satisfaction.

This course will highlight how general practitioners and specialists from different disciplines can interact and collaborate effectively in order to return oral health, function and esthetics to patients.

A team of experts from the Herman Ostrow School of Dentistry of USC will present up-to-date interdisciplinary clinical approaches and discuss techniques to help you enhance successful outcomes of your clinical cases.

- Conservative treatment plans and sequence for predictable esthetic and functional results by combining different treatment modalities and products.
- Simple and effective techniques to expand the use of direct composite restorations.
- Benefits of pre-restorative orthodontic treatment to preserve tooth structure.
- Pathways of infection between the dental pulp and periodontal ligament.
- Interrelationship between endodontic and periodontal diseases.
- Diagnosis and clinical decision-making for treating endodontic-periodontal cases.

- Dental implant as a foreign body.
- Periodontal tissues as compared to peri-implant tissues in health and disease.
- Diagnostic and prognostic challenges in periodontitis and peri-implant diseases.
- Replacing missing or compromised teeth.
- Interdisciplinary treatment planning for implant therapy.

**Topics to be covered:**

- Pathways of infection between the dental pulp and periodontal ligament.
- Interrelationship between endodontic and periodontal diseases.
- Diagnosis and clinical decision-making for treating endodontic-periodontal cases.
