Surgical placement of implants
• Surgical considerations and treatment planning
• Anatomic and skeletal considerations for overdenture vs. fixed restoration
• Loading protocol

Laboratory techniques and procedure

Hands-on workshop
• Participants will place implants in edentulous models and restore with overdenture

Live surgery demonstration
• Participants will observe implant placement and restoration with overdenture on a live patient

Who will benefit from attending this course:
This course is appropriate for any clinician who is interested in gaining a comprehensive training in implant dentistry:
• Novice or experienced clinicians
• Surgical specialists who would like to acquire a more in-depth and comprehensive understanding of implant restoration
• Restorative dentists who would like to acquire a more in-depth and comprehensive understanding of implant surgery
• Allied health professionals (Laboratory technicians, dental hygienists and dental assistants)

Topics to be discussed:

Diagnosis and treatment planning
• Diagnostic tools: radiographs, CT scan, cone beam, interactive imaging
• Treatment planning and case selection:
  - Implant-supported overdenture vs. fixed restoration
  - Bar-clasp vs. male-female solitary attachments for overdentures
  - Screw-retained vs. cemented fixed restoration
• Surgical guides: lab fabricated and computer-generated surgical guides

Implant prosthetics
• Implant prosthetic considerations
• Occlusion and stress distribution for overdentures and fixed restorations
• Prosthetic space requirement for overdenture or fixed restoration components
• Overdenture attachment selection: bar-clasp, solitary attachments
• Conversion of existing denture into implant-supported overdenture
• Denture boarder molding

According to CDC data, approximately one-third of Americans over the age 65 are edentulous and their number is projected to increase over the next twenty years. Implant-supported prostheses have been documented to improve the quality of life of patients and are gaining acceptance as the standard of care. A variety of treatment options exist for edentulous patients. Implant-supported prostheses can solve many of the problems experienced by patients with complete dentures. This intense 2-day course brings together surgical and prosthodontic experts for a systematic presentation of therapeutic options for edentulous patients. The format of this course consists of lecture, hands-on workshop and live surgery demonstration.

SYNOPSIS

All speakers must disclose to the audience any proprietary, financial or other personal interest of any nature or kind, in any product, service, source and/or company, or in any firm beneficially associated therewith that will be discussed or considered during their presentation. The Herman Ostrow School of Dentistry of USC does not view the existence of these interests or uses as implying bias or decreasing the value to participants. The Herman Ostrow School of Dentistry of USC, along with ADA CERP, feels that this disclosure is important for the participants to form their own judgment about each presentation.
