STAY AND LEARN PACKAGE

All Stay and Learn Packages include course tuition, breakfast and lunch (one enrollee), 2 nights stay at the 5-star Cosmopolitan Las Vegas Hotel (City Room with 2 Queen Beds), self or valet parking, resort fees, free in-room high-speed internet access, 24-hour access to state-of-the-art fitness center, pools, unlimited local and domestic long distance calls (50 states), and tennis court access (based upon availability). Please book your Stay and Learn Packages early since rates of the hotel may increase after June 20, 2016. To book Terrace Studio/Suite with 1 King Bed or additional nights, please contact our office at 213-821-2127.

* Hotel room rates are for single or double occupancy. Maximum room occupancy is four (4) persons. No additional charge for children. Charges for a 3rd or 4th adult in room will apply. Cancellation fee will apply if booking is cancelled after June 3, 2016. For course tuition without hotel, please call our office at 213-821-2127.

The Immediate Implant
Atraumatic Extraction, Immediate Implant Placement, Chairside Provisional Restoration
A Lecture and Hands-On Workshop

Saturday - Sunday, July 30 - 31, 2016. 8:00am - 5:00pm

The Cosmopolitan of Las Vegas, 3708 Las Vegas Boulevard South, Las Vegas, NV 89109
Immediate implant placement and immediate provisionalization has gained popularity because it may reduce treatment time and the number of surgical interventions. A recent systematic review of the scientific evidence supports immediate implant placement as a safe procedure when certain guidelines are followed. This course will focus on all aspects of immediate implant placement and immediate provisionalization, including atraumatic extraction instrumentation and techniques, immediate implants in molar sites, management of extraction sites with labial wall defects, fabrication of an immediate chairside provisional restoration, and much more. Discussion will focus on some of the most commonly asked questions, such as which is the best graft material to use to graft the gap? What type of interim provisional restoration to use in order to minimize hard and soft tissue loss? What decisions should be made regarding immediate and delayed implant placement? Describe the difference in bone response between immediate and delayed implants? Identify risk factors for complications with immediate implants? Be able to perform socket grafting? Literature and indications for grafting? How to manage the post-extraction site in order to minimize hard and soft tissue loss? Identify differences in implant stability between immediate and delayed implants? Be able to fabricate provisional restorations to load immediate implants? Be familiar with PMMA and Bis GMA provisional resin materials? Know the advantages and disadvantages of screw retained and cement retained provisional restorations? Have enough information to decide with confidence which type of provisional restoration to routinely use?

Upon completion of the course participants should:
- Know principles of proper implant positioning
- Perform minimally invasive tooth removal techniques and instrumentation
  - Remove broken and difficult teeth with minimal flap
- Know the pros and cons of immediate versus delayed implant placement
- Know how to manage the post-extraction site in order to minimize hard and soft tissue loss
- Identify differences in implant stability between immediate and delayed implants
- Be able to fabricate provisional restorations to load immediate implants
- Be familiar with PMMA and Bis GMA provisional resin materials
- Know the advantages and disadvantages of screw retained and cement retained provisional restorations
- Be able to perform socket grafting
- Literature and indications for grafting
- What to look for in choosing a graft material
- Know the management of extraction sites with facial bony defects
- Be able to fabricate provisional restorations to load immediate implants
- Be familiar with PMMA and Bis GMA provisional resin materials
- Know the advantages and disadvantages of screw retained and cement retained provisional restorations
- Have enough information to decide with confidence which type of provisional restoration to routinely use.

Immediate Provisionalization: Lecture & Hands-On

There are many ways to effectively provisionalize the immediate implant, and in this presentation several options will be discussed. These options include cement retained and screw retained provisionalis, utilizing either temporary abutments or definitive abutments. Also techniques for utilizing prefabricated crown forms and vacu-formed matrices will be discussed. Different material choices will be presented, such as poly-methylmethacrylate (PMMA) acrylic resins and dimethacrylate (Bis GMA) composite resins. And finally the advantages and disadvantages of the different techniques and different materials will be analyzed.
