The Immediate Implant
Atraumatic Extraction, Immediate Implant Placement, Chairside Provisional Restoration
A Lecture and Hands-On Workshop

Saturday - Sunday, July 28 - 29, 2018, 8:00am - 5:00pm

The Cosmopolitan of Las Vegas. 3708 Las Vegas Boulevard South. Las Vegas, NV 89109
Immediate Implant: Lecture & Hands-On

Immediate implant placement and immediate provisionalization has gained popularity because it may reduce treatment time and the number of surgical interventions. A recent systematic review of the scientific evidence supports immediate implant placement as a safe procedure when certain guidelines are followed. This course will focus on all aspects of immediate implant placement and immediate provisionalization, including atraumatic extraction instrumentation and techniques, immediate implants in molar sites, management of extraction sites with labial wall defects, fabrication of an immediate chairside provisional restoration, and much more. Discussion will focus on some of the most commonly asked questions, such as which is the best graft material to use to graft the gap? What type of interim provisional restorations to use in order to minimize tissue loss? What decisions should be made regarding immediate implant placement versus delayed implant placement. This course is designed for the novice and advanced clinician and is the first in our series on implant site development and bone grafting.

Immediate Provisionalization: Lecture & Hands-On

There are many ways to effectively provisionalize the immediate implant, and in this presentation several options will be discussed. These options include cement retained and screw retained provisionalizations, utilizing either temporary abutments or definitive abutments. Also techniques for utilizing prefabricated crown forms and vacu-formed matrices will be discussed. Different material choices will be presented, such as poly-methylmethacrylate (PMMA) acrylic resins and dimethacrylate (Bis GMA) composite resins. And finally the advantages and disadvantages of the different techniques and different materials will be analyzed.

This course is intended for dentists, periodontists, oral surgeons, prosthodontists, dental hygienists, dental assistants and those who are interested in improving their knowledge and skills with immediate implants. Please be cautious about the potential risks of using limited knowledge when integrating new techniques into your practices.

Upon completion of the course participants should:

- Know principles of proper implant positioning
- Perform minimally invasive tooth removal techniques and instrumentation
- Remove broken and difficult teeth with minimal flap
- Know the pros and cons of immediate versus delayed implant placement
- Describe the difference in bone response between immediate and delayed implants
- Identify risk factors for complications with immediate implants
- Be able to perform socket grafting
- Literature and indications for grafting
- What to look for in choosing a graft material
- Have enough information to decide with confidence which type of provisional restoration to routinely use
- Know how to manage the post-extraction site in order to minimize hard and soft tissue loss
- Identify differences in implant stability between immediate and delayed implants
- Be able to fabricate provisional restorations to load immediate implants
- Be familiar with PMMA and Bis GMA provisional resin materials
- Know the advantages and disadvantages of screw retained and cement retained provisional restorations
- Know the management of extraction sites with facial bony defects
- Have enough information to decide with confidence which type of provisional restoration to routinely use
- Be able to fabricate provisional restorations to load immediate implants
- Be familiar with PMMA and Bis GMA provisional resin materials
- Know the advantages and disadvantages of screw retained and cement retained provisional restorations
- Have enough information to decide with confidence which type of provisional restoration to routinely use
- Be able to fabricate provisional restorations to load immediate implants
- Be familiar with PMMA and Bis GMA provisional resin materials
- Know the advantages and disadvantages of screw retained and cement retained provisional restorations
- Have enough information to decide with confidence which type of provisional restoration to routinely use
- Be able to fabricate provisional restorations to load immediate implants
- Be familiar with PMMA and Bis GMA provisional resin materials
- Know the advantages and disadvantages of screw retained and cement retained provisional restorations
- Have enough information to decide with confidence which type of provisional restoration to routinely use
- Be able to fabricate provisional restorations to load immediate implants
- Be familiar with PMMA and Bis GMA provisional resin materials
- Know the advantages and disadvantages of screw retained and cement retained provisional restorations
- Have enough information to decide with confidence which type of provisional restoration to routinely use
- Be able to fabricate provisional restorations to load immediate implants
