Ostrow School of Dentistry of USC is an ADA CERP recognized provider
Dr. Clark is a wealth of knowledge. You can always count on picking up valuable information that is relevant to any practice from his lectures and presentations.

The class was very good and the doctors explained everything very well. I recommend the class to everyone.

### Topics to be discussed:

- Issues of California drug law, the DEA/DOJ and using off-label prescriptions.
- Advances in pharmacogenetics as a way of predicting drug to drug interactions and adverse drugs reactions.
- Treatment of chronic pain using behavioral, physical and surgical therapies.
- Use of an electronic medical record and automated computer-patient interface for medical documentation.
- Smart phone-based drug program.
- Pain diary and pain treatment agreements in dental practice.

### Upon completion participants should be able to know:

- Medications used in dentistry and the Law: What can be prescribed and what not?
- 10 Top medications used in an OFP Specific Treatment Center.
- Metabolism of medications including liver enzymes systems.
- The various chronic pain diseases that appear in the orofacial region.
- Non-pharmacologic therapies for OFP.
- Pharmacogenetics and medication efficacy.
- Current approaches for treating non-malignant chronic orofacial pain.
- How to conduct a myofascial examination.
- How to perform therapeutic injections (trigger point, botulinum toxin and corticosteroids).

### Synopses

This two-day course will cover the medications used to treat chronic orofacial pain, including neurogenic, musculoskeletal, headache and uncommon pain disorders. To be able to treat patients with these problems, dentists must understand the underlying mechanisms of pain transmission, nerve injury and repair, sensitization, sympathetic pain maintenance and spontaneous ectopic pain generation. Dentists must be able to perform various analgesic blocks and sensory testing procedures as well as understand how these procedures combined with historical information allow for a differential etiologic-based diagnosis to be made. This course is divided into lecture presentations in the morning and specific case discussions at the end of the day.

### Testimonials

“Dr. Clark is a wealth of knowledge. You can always count on picking up valuable information that is relevant to any practice from his lectures and presentations.”

“The class was very good and the doctors explained everything very well. I recommend the class to everyone.”
