Module I - Los Angeles: Friday, February 20, 2009
Module II - Los Angeles: Saturday - Sunday, February 21 - 22, 2009

112 Years of Tradition and Excellence
This course focuses on Chronic Orofacial Pain and headaches (e.g. Neuropathic Pain, Neurovascular Pain, Neuralgia, Neuritis and Neuroma). It reviews underlying mechanisms of pain induction, nerve injury and repair, sensitization and spontaneous ectopic pain generation. Lectures include an explanation of how various analgesic blocks and sensory testing procedures, in combination with historical information, produce a differential diagnosis of neurogenous and headache pain. Lectures will also focus on the appropriate pharmacologic, behavioral, surgical, and physical medicine management procedures for these conditions. Finally, real patient cases will be presented with the goal of helping the attendee become more comfortable in diagnosing and treating OFP disorders and providing them with a new understanding of chronic pain.

Topics to be covered:
- Chronic Orofacial Pains (neuralgias, neuromas and neuropathies of the trigeminal nerve)
- Headache disorders which mimic TMD and cause orofacial pain
- Neurology for the novice
- New medications used for pain
- Examination methods for chronic pain

Upon completion of this course you will be able to:
- Understand the neuroanatomy, neurophysiology and pathobiology of the trigeminal nociceptive system
- Understand neurogenous and neurovascular diseases
- Be able to conduct a differential diagnosis of neurogenous and headache disorders
- Understand the current therapies used for these problems
- Know the current therapies used for these problems
- Understand how neurovascular headaches can convert from episodic to chronic
- Know the latest medications that are used for managing both neurovascular and neurogenous pain
- Understand how to make stents, perform intramuscular injections, and conduct a myofascial examination
