Katherine J. Sullivan PhD, PT, FAHA
Associate Professor of Clinical Physical Therapy, Division of Biokinetics and Physical Therapy, Ostrow School of Dentistry of USC and a Faculty Fellow at the Center for Excellence in Teaching at USC.

Synopsis

Unlike previous generations, older adults are seeking dental care in far greater numbers as their life span lengthens and the numbers of seniors in the population increase. Unique to this population are factors such as variable health profiles, social support systems, and functional capabilities. Oral health findings can also be highly variable whether they are compounded by a lifetime of treatment or neglect. Many individuals or their families expect to maintain or restore their dentition and receive regular oral health care with the latest innovative materials and technology available.

Recognizing the diverse nature of the elderly and their needs, this symposium will approach the older adult from a functional perspective and include topics that cover many of the relevant issues faced when treating aging individuals. Practice approaches for both the healthy, community-based patient and frailer individuals will be discussed.

Topics to be covered:

- The impact of oral care on overall quality of life in older adults.
- Biomimetic restorations in the aging dentition.
- Oral infections and their impact on inflammation and systemic disease.
- Myths, barriers, issues and approaches to dental implants in older patients.
- The social worker’s role and contribution to your dental patients.
- Periodontal disease: How it manifests and is treated in older adults.
- Accommodating stroke patients in the dental office.
- Breaking news in aging topics.
- Tips for your office staff on communicating with elders.
- Treating the elderly in your private practice and nursing home settings.

Upon completion participants should be able to:

- Recognize the importance of oral health to overall quality of life for older adults.
- Understand the implications of biomimetics in restorative treatment.
- Appreciate the current scientific findings on systemic inflammation and oral health.
- Identify the overall barriers preventing people from getting needed oral health care.
- Understand the bio-psycho-social approach to assessing issues of patients.
- Appreciate the diagnosis and management of periodontal disease in older adults.
- Recognize the accommodations needed for stroke patients in the dental office.
- Describe the steps to take to improve communication with older dental patients.
- Understand the unique aspects of caring for adults in home and facility settings.

Registration Fees

<table>
<thead>
<tr>
<th>Before September 15, 2012</th>
<th>Dentist: $445 • Auxiliary: $325</th>
