3 + 1 Free CE Program
The More You Learn, The More You Earn!
Take any 3 CE courses between January and December 2015 and receive another course for free.

Herman Ostrow School of Dentistry of USC
Friday - Saturday
October 2 – 3, 2015
9:00 a.m. - 5:00 p.m.

Herman Ostrow School of Dentistry of USC
Continuing Professional Education

Life-Long Tradition and Excellence
Topics to be covered:

- CAD/CAM technology to fabricate dentures
- Participatory e-health games and applications
- Physical, cognitive and psychosocial characteristics of the oldest of the old
- No-post designs and advantages to non-retainive restorative designs
- New anti-coagulant medication protocols for dental care
- New medical technological advances
- Non-pharmacology management of demented dental patients
- Health foods and dietary supplements topics for older adults
- Dental treatment modifications for multiply involved patients
- Systematic approach to improving access and negotiating narrow canals
- Medication induced osteonecrosis of the jaw

Upon completion participants should be able to:

- Make a case for assessment of technological savvy and habits of the patient as a means of tailoring care
- Identify physical, cognitive and psychosocial characteristics of adults with longer than expected lifespans
- Master the key elements of adhesion to dentin
- Enumerate the pros and cons of CAD/CAM technology for denture fabrication
- Utilize proper approaches for patients on the newer anticoagulant medications
- Appreciate advanced medical technology being used in dental patients
- Illustrate non-pharmacological techniques to utilize in managing demented dental patients
- Explain to patients the latest health foods and need for dietary supplements
- Appreciate the application of dental treatment modifications for a medically complex patient
- Learn how to overcome the challenges encountered when providing endodontic therapy to geriatric patients
- Use AAOMS recommendations to manage medication induced osteonecrosis of the jaw

Older adults are seeking dental care in far greater numbers, expecting to have the latest innovative materials and technologic approaches available to them. Unique to this population are factors such as variable health profiles, social support systems, and functional capabilities. Oral health findings can also be highly variable whether compounded by a lifetime of treatment or neglect and often compromised by systemic issues.

Recognizing the diverse nature of the elderly and their needs, this symposium will approach the older adult from a practical perspective and include topics that cover many of the relevant issues faced when treating aging individuals. Practice approaches for both the healthy, community-based patient and frailer individuals will be discussed.

All speakers must disclose to the audience any proprietary, financial or other personal interest of any nature or kind, in any product, service, source and/or company, or in any firm beneficially associated therewith that will be discussed or considered during their presentation. The Herman Ostrow School of Dentistry of USC does not view the existence of these interests or uses as implying bias or decreasing the value to participants. The Herman Ostrow School of Dentistry of USC, along with ADA CERP, feels that this disclosure is important for the participants to form their own judgment about each presentation.

Upon completion participants should be able to:

- Make a case for assessment of technological savvy and habits of the patient as a means of tailoring care
- Identify physical, cognitive and psychosocial characteristics of adults with longer than expected lifespans
- Master the key elements of adhesion to dentin
