34th Annual Review of Continuing Education in Dentistry
Maui: Bone Grafting From A to Z
Big Island: Avoiding and Managing Complications Associated with Implant Therapy
Course Tuition Registration Form

Dr. Hahcwald is a Clinical Professor at the USC School of Dentistry where he was the Past Director of Undergraduate Oral and Maxillofacial Surgery. He is currently Co-Director of the USC Graduate, Implant Program, Dr. Hahcwald is a Diplomate of the American Board of Oral and Maxillofacial Surgery, and a Fellow in the American Association of Oral and Maxillofacial Surgeons. He has extensive experience in periodontal and implant surgery, which has been his focus of interest in practice. He is currently in private practice in Bellflower and Huntington Beach, California.

This advanced bone graft course will focus on the most current techniques in bone grafting to improve long-term clinical success with dental implants. This course will enable you, the clinician, to broaden your knowledge and scope of practice and improve surgical skill and implant expertise.

Upon completion of this course you will be able to:

- Understand bone biology and grafting healing
- Compare various graft materials
- Perform atraumatic and flapless tooth removal
- Know techniques for socket preservation
- Know the techniques of immediate implant placement
- Know alveolar ridge augmentation techniques for maxillary and mandibular grafting
- Understand predictable vertical and horizontal alveolar onlay grafting
- Know a ridge split technique/expansion technique
- Understand advantages and disadvantages of different flaps designs as it relates to esthetics
- Know maxillary sinus grafting including Caldwell-Luc approach, and endoscopic technique
- Know how to harvest ramus and chin grafts
- Recognize and treat graft complications
- Management of implant dehiscence and fenestration
- Management of graft dehiscence, graft failures and graft infections
- Management of implant dehiscence and fenestration
- Management and avoiding complications associated with sinus augmentation such as graft infection and failure, sinusitis, oral-antrol communication, and sinus fistula
- Management of peri-implants
- Management of nerve injury associated with implant surgery
- Classification of levels of injury, charting and prognosis
- Management of failed implants and implant removal with minimal bone trauma
- How to avoid esthetic complications

Big Island: Avoiding and Managing Complications Associated with Implant Therapy

The number of claims related to implant complications has increased significantly over the last few years. In addition, complications associated with implant surgery can have a devastating effect on the final outcome of treatment. This course will focus on how to identify and avoid potential complications before they arise and how to manage many of the common complications that can occur with implant surgery. Emphasis will be given to patient risk assessment, classifications of complications, and proper treatment planning principles. At the end of this course, participants will have a better understanding of the management of complications associated with implant therapy.

Upon completion of this course you will be able to know:

- Pre-operative risk assessment
- How to avoid and minimize risks associated with bone grafting procedures
- Classification of levels of injury, charting and prognosis
- Classification of levels of injury, charting and prognosis
- Management of graft dehiscence, graft failures and graft infections
- Management of implant dehiscence and fenestration
- Management and avoiding complications associated with sinus augmentation such as graft infection and failure, sinusitis, oral-antrol communication, and sinus fistula
- Management of peri-implants
- Management of nerve injury associated with implant surgery
- Classification of levels of injury, charting and prognosis
- Management of failed implants and implant removal with minimal bone trauma
- How to avoid esthetic complications
