Comprehensive Surgical & Restorative Implant Training Program

★ Lectures
★ Hands-on workshops on implant surgery and prosthetics
★ Live surgery and restorative case demonstrations

COURSE A: SEPTEMBER 9 - 10, 2006
       OCTOBER 7 - 8, 2006
       NOVEMBER 11 - 12, 2006
COURSE B: DECEMBER 9 - 10, 2006
COURSE C: APRIL 13 - 15, 2007
COURSE D: MAY 4 - 6, 2007
COURSE E: JUNE 1 - 3, 2007

109 Years of Tradition and Excellence
Dear Colleagues:

Implant dentistry has become an integral part of clinical practice. Whether you focus on implant placement surgery or restoration, comprehensive training in both surgical and restorative aspects is the most effective approach to advance your clinical skills.

The USC Comprehensive Surgical and Restorative program offers a continuum of courses, which are appropriate for any clinician who is interested in gaining a comprehensive training in implant dentistry. The courses will start at the fundamental level and build upon that knowledge in latter courses for clinicians with intermediate or advanced experience. However, the fundamental courses are also appropriate for surgeons who would like to have better understanding of implant restoration or restorative dentists who would like to have better understanding of implant surgery. The acquisition of comprehensive knowledge and skills is likely to improve communication, collaboration and patient care.

The format of these courses include lecture presentations by world-renowned faculty, hands-on workshops, as well as live surgery demonstrations. Lecture presentations are evidence-based in nature and include clinical cases to illustrate the principles discussed. The small group setting in the state of the art facility of the University of Southern California School of Dentistry will provide course participants with a unique educational opportunity.

Homayoun Zadeh, DDS, PhD (Course Director)

*You tell me, and I forget. You teach me, and I remember. You involve me, and I learn.*  - Benjamin Franklin -

COURSE A
FUNDAMENTALS OF IMPLANT SURGERY AND RESTORATION

Speakers
Dr. Yang Chai, Dr. Fereidoun Daftary, Dr. Baldwin Marchack, Dr. Richard Sullivan, Mr. Kurt Tennyson, Dr. Homayoun Zadeh

Overview
CDC data have estimated that despite the decline in proportion of edentulous persons in the United States, the projected number of edentulous patients will increase over the next decades due to the population growth. It is now accepted that implant restorations is often the most conservative treatment for tooth replacement. This 6-day course, spread over 3 weekends, consists of lectures, hands-on workshops and live surgery demonstration and is designed to provide the theoretic framework, as well as the skills necessary for clinicians to incorporate implant dentistry into their practice.

Conceptual topics
- Biologic basis of Osseointegration
- Anatomy of implant sites and surrounding structures

Diagnosis and treatment planning
- Treatment planning & case selection:
  - Single-unit tooth replacement
  - Multiple-unit tooth replacement
  - Fully edentulous patients
- Diagnostic tools: radiographs, CT scan, tomography
- Surgical guides: lab fabricated and computer-generated surgical guides

Surgical placement of implants
- Surgical considerations and treatment planning
- Hands-on workshop: participants will place implants in models
- Live surgery: participants will observe implant placement in patients
- Preservation & augmentation of hard & soft tissues

Implant prosthetics
- Implant restorative options
- Implant impression techniques:
  - Hands-on workshop
  - Live patient demonstration
- Abutment selection: prefabricated abutments, computer designed abutments, ceramic abutments
- Immediate vs. staged implant placement

Immediate vs. staged implant loading
Provisional placement: immediate vs. staged

Laboratory techniques and procedures

Marketing and promotion
- Incorporating implant dentistry in a surgical or restorative practice
- Case presentation
- Fee schedule determination

Who will benefit from attending this course:
This course is appropriate for any clinician who is interested in gaining a comprehensive training in implant dentistry:
- Beginners with limited implant knowledge
- Surgical specialists who would like to acquire a more in depth and comprehensive understanding of implant restoration
- Restorative dentists who would like to acquire a more in depth and comprehensive understanding of implant surgery
- Allied health professionals (Laboratory technicians, dental hygienists and dental assistants) who participate as members of the implant therapy team and would like to be more effective in their functions by enhancing their fundamental and practical knowledge

LOCATION: USC School of Dentistry
DATES: Saturday - Sunday, September 9 - 10, 2006
       October 7 - 8, 2006
       November 11 - 12, 2006
TIME: 8:00 a.m. - 5:00 p.m.
COURSE FEE: Before August 15, 2006
             Dentist: $3,995
             Faculty & Auxiliary: $1,995
             After August 15, 2006
             Dentist: $4,195
             Faculty & Auxiliary: $2,095
Overview

The long-term success of implant-supported prostheses requires an evidence-based approach to therapy. This 2-day course consists of lectures, hands-on workshops and live surgery demonstration and is designed to supplement the knowledge of biologic principles, as well as technical skills, which are the prerequisites of achieving predictable outcomes in implant dentistry.

Educational Objectives

Conceptual topics
- Factors affecting the stability of the peri-implant tissues
- Influence of implant component design on esthetic outcome

Diagnosis and treatment planning
- Treatment planning and case selection:
  - Single-unit tooth replacement
  - Multiple-unit tooth replacement
  - Fully edentulous patients
- Diagnostic tools: radiographs, CT scan, tomography
- Surgical guides: lab fabricated and computer-generated surgical guides

Surgical placement of implants
- Surgical considerations and treatment planning
- Hands-on workshop: participants will place implants in models
- Live surgery: participants will observe implant placement in patients
- Preservation & augmentation of hard & soft tissues

Implant prosthetics
- Implant restorative options
- Implant impression techniques
  - Hands-on workshop
  - Live patient demonstration

- Abutment selection: prefabricated abutments, computer designed abutments, ceramic abutments
- Immediate vs. staged implant placement
- Immediate vs. staged implant loading
- Provisional placement: immediate vs. staged

Laboratory techniques and procedures

Who will benefit from attending this course:

This course is appropriate for any clinician who is interested in gaining a comprehensive training in implant dentistry:

- Clinicians with previous implant experience who would like to learn additional implant systems
- Surgical specialists who would like to acquire a more in depth and comprehensive understanding of implant restoration
- Restorative dentists who would like to acquire a more in depth and comprehensive understanding of implant surgery
- Allied health professionals (Laboratory technicians, dental hygienists and dental assistants) who participate as members of the implant therapy team and would like to be more effective in their functions by enhancing their fundamental and practical knowledge

LOCATION: USC School of Dentistry
DATES: Saturday - Sunday, December 9 - 10, 2006
TIME: 8:00 a.m. - 5:00 p.m.
COURSE FEE: Before November 1, 2006 ▶ Dentist: $1,295 Faculty & Auxiliary: $695
After November 1, 2006 ▶ Dentist: $1,695 Faculty & Auxiliary: $795
SPEAKERS

Dr. Lyndon Cooper, Dr. Fereidoun Daftary, Dr. Yoshihiro Goto, Dr. Joseph Kan, Dr. Pascal Magne, Dr. Homayoun Zadeh

OVERVIEW

The anterior maxilla is often referred to as the “esthetic zone”. Tooth replacement in the esthetic zone presents unique challenges for the clinician. Yet, achievement of optimal esthetics in this area can be most rewarding. The prerequisites of achieving a successful esthetic outcome in this region include: 1) knowledge of the biology of the implant-prosthesis-tissue interface and their post-treatment alterations; 2) careful preoperative treatment planning; 3) augmentation of hard and soft tissues when deficiencies exist and 4) attention to detail in execution of surgical and prosthetic techniques. This course will review the biological fundamentals, as well as the clinical surgical and restorative techniques involved.

EDUCATIONAL OBJECTIVES

- Biology of implant-prosthesis-tissue interface
- Factors affecting the stability of the peri-implant tissues
- Treatment planning and case selection:
  - Surgical considerations
  - Prosthetic considerations
- Diagnostic tools: CT imaging, surgical guide
- Computer-assisted implant positioning
- The applications of microscope in implant surgery
- Influence of implant component design on esthetic outcome
- Selection and sequencing of implant site-development techniques
- Orthodontic therapy for site development
- Soft tissue augmentation around implants
- Papilla preservation and regeneration around implants
- Minimally invasive tooth extraction
- Ridge preservation and augmentation
- Immediate implant placement vs. staged implant placement
- Minimally invasive implant placement
- Immediate vs. delayed implant loading
- Implant impression techniques
- Abutment selection
- Provisional placement: immediate vs. staged
- Laboratory techniques and procedures

HANDS-ON WORKSHOP

- Minimally invasive tooth extraction
- Socket preservation techniques
- Implant placement into extraction socket
- Imression techniques
- Abutment modification
- Provisional fabrication

LIVE SURGERY DEMONSTRATION

- Minimally invasive tooth extraction
- Implant placement into extraction socket
- Fixture-level impression
- Abutment modification
- Provisional fabrication

WHO WILL BENEFIT FROM ATTENDING THIS COURSE:

This course is suitable for clinicians with intermediate or advanced experience in implant dentistry:
- Surgical specialists and restorative dentists who would like to acquire a more in depth and comprehensive understanding, as well as practical skills to achieve predictable treatment outcome in the esthetic zone
- Allied professionals (Laboratory technicians, dental hygienists and dental assistants) who participate as members of the implant therapy team and would like to be more effective in their functions by enhancing their fundamental and practical knowledge

LOCATION: USC School of Dentistry
DATES: Friday - Sunday, April 13 - 15, 2007
TIME: 8:00 a.m. - 5:00 p.m.
COURSE FEE: Before March 1, 2007
Before March 1, 2007
Dentist: $1,695
Faculty & Auxiliary: $895
After March 1, 2007
Dentist: $1,895
Faculty & Auxiliary: $995
COURSE D
IMPLANT THERAPY IN COMPROMISED SITES

Overview

The success of dental implants depends on their placement in bone of adequate density and volume in order to achieve primary stability. However, there is usually at least some degree of atrophy in most implant sites due to post-extraction remodeling or because of pathologic conditions. There has been a gradual shift in paradigm from merely achieving successful osseointegration to achieving final restorative outcomes that mimic natural dentition and the surrounding oral tissues. These objectives have been materialized by advancements in surgical techniques, as well as availability of biomaterials to enable predictable regeneration or oral hard and soft tissues. This course will review the biological fundamentals, as well as the clinical surgical and restorative techniques involved in treating patients with compromised hard and soft tissues.

Educational Objectives

- Reconstruction of prosthetically or anatomically compromised patients
- Selection and sequencing of implant site-development techniques
- Sinus augmentation rationale and techniques
- Horizontal ridge augmentation
- Vertical ridge augmentation
- Distraction Osteogenesis
- Mandibular block autografting
- Onlay block grafts: rationale and techniques
- Guided bone regeneration
- Soft tissue augmentation around implants
- Immediate loading
- Prosthetic options for complex cases
- Diagnostic tools: CT imaging, surgical guide
- Computer-assisted implant positioning
- Orthodontic therapy for site development
- Minimally invasive tooth extraction
- Socket preservation and augmentation
- Immediate implant placement vs. staged implant placement
- Minimally invasive implant placement
- Immediate vs. delayed implant loading
- Implant impression techniques
- Provisional placement: immediate vs. staged
- Laboratory techniques and procedures

Hands-on workshop

- Lateral window and dental sinus augmentation
- Donor graft harvesting from ramus and symphysis
- Recipient site preparation and block graft fixation
- Guided bone regeneration

Live surgery demonstration

- Implant placement
- Bone and soft tissue grafting around implant sites

Who will benefit from attending this course:

This course is suitable for clinicians with intermediate or advanced experience in implant dentistry:

- Surgical specialists and restorative dentists who would like to acquire a more in depth and comprehensive understanding, as well as practical skills to achieve predictable treatment outcome in patients with compromised bone or soft tissues, as well as in management of complex prosthetic treatment plans
- Allied professionals (Laboratory technicians, dental hygienists and dental assistants) who participate as members of the implant therapy team and would like to be more effective in their functions by enhancing their fundamental and practical knowledge

LOCATION: USC School of Dentistry
DATES: Friday - Sunday, May 4 - 6, 2007
TIME: 8:00 a.m. - 5:00 p.m.
COURSE FEE: Before April 1, 2007 Dentist: $1,695 Faculty & Auxiliary: $895
After April 1, 2007 Dentist: $1,895 Faculty & Auxiliary: $995
Overview

A variety of clinical scenarios may present, requiring complex prosthetic restoration. A key to success is careful planning and simplification of therapy, based on sound principles. A wide array of restorative options are available today. Selection of the appropriate prosthesis requires consideration of the patient anatomy, quantity and quality of available hard and soft tissues, the need for augmentation surgery, esthetic requirements, occlusal scheme and patient’s desires. The objective of this course is to review the fundamentals for prosthetic restoration of implant patients. An evidence-base approach will be used to provide treatment options with high degree of predictability. Practical solutions to common prosthetic problems will be provided.

Educational Objectives

- Prosthetic options for complex cases
- Treatment of fully-edentulous maxilla and mandible
- Treatment of compromised dentition requiring full-arch extraction
- Decision-tree for selection of fixed versus removable restoration
- Immediate and early loading
- Diagnostic tools: CT imaging, surgical guides
- Computer-assisted planning and implant positioning
- Immediate implant placement vs. staged implant placement
- Assessment of need and sequencing of implant site-development techniques
- Implant impression techniques
- Screw-retained vs. cement-retained restorations
- Application of CAD/CAM in abutment and restoration fabrication
- Abutment selection guidelines
- Occlusal considerations and guidelines
- Provisional options and techniques
- Prosthetic complication and their management
- Dental materials used in implant restoration
- Laboratory techniques and procedures

Hands-on workshop

- Implant impression techniques
- Provisional fabrication for multiple-unit restoration
- Abutment modification

Live surgery demonstration

- Implant impression techniques
- Provisional fabrication for multiple-unit restoration
- Abutment modification

Who will benefit from attending this course:

This course is suitable for clinicians with intermediate or advanced experience in implant dentistry:

- Restorative dentists and surgical specialists who would like to acquire a more in depth and comprehensive understanding necessary for management of patients requiring complex prosthetic restoration
- Allied professionals (Laboratory technicians, dental hygienists and dental assistants) who participate as members of the implant therapy team and would like to be more effective in their functions by enhancing their fundamental and practical knowledge

LOCATION: USC School of Dentistry
DATES: Friday - Sunday, June 1 - 3, 2007
TIME: 8:00 a.m. - 5:00 p.m.
COURSE FEE:
Before May 1, 2007  Dentist: $1,695  Faculty & Auxiliary: $895
After May 1, 2007  Dentist: $1,895  Faculty & Auxiliary: $995
Overview

Surgical assistants are important members of the implant surgical team. Familiarity with the latest concepts and procedures will facilitate communication and patient care in a successful practice. For more in-depth and comprehensive understanding of implant surgery and restoration, assistants are encouraged to register also for Course A.

Educational Objectives

- Introduction to implant dentistry for surgical assistants
- Review of implant terms, components and treatment options
- Patient education, pre- and post-operative instructions
- Preparation of the surgery room for procedure
- Patient preparation for surgery
- Description of instruments and equipments used in implant surgery
- Set-up and handling of surgical instruments, equipment, sterile drapes, and sterile solutions
- Proper techniques of scrubbing for surgery and donning of sterile gowns and gloves
- Sterile instrument transfer and surgical assistance
- Implant maintenance

Who will benefit from attending this course:

This course is appropriate for any allied professionals who are involved in the care of implant patients:

- Clinical assistants who assist during implant surgery
- Implant coordinators involved in planning and coordinating the treatment of implant patients

LOCATION: USC School of Dentistry
DATE: Sunday, October 8, 2006
TIME: 8:00 a.m. - 5:00 p.m.
COURSE FEE: Before September 1, 2006 Auxiliary: $250
After September 1, 2006 Auxiliary: $295

Yang Chai, DDS, PhD
Associate Professor and Chair, Division of Craniofacial Sciences and Therapeutics USC School of Dentistry. He has completed his dental education, as well as earned the Ph.D. degree in Craniofacial Biology at USC. He had previously obtained his dental degree, as well as post-doctoral training in Oral-Maxillofacial Surgery at the Beijing Medical University, Beijing, China. He engages in active NIH-funded research at the Center for Cell and Molecular Biology (CCMB) at USC, focusing on craniofacial development. He has published extensively in peer-review journals, as well as book chapters. Dr. Chai has received numerous awards, including several Awards of Excellence in Teaching at USC.

Lyndon F. Cooper, DDS, PhD
Dr. Cooper is the Stallings Distinguished Professor of Dentistry within the Departments of Prosthodontics and Biochemistry & Biophysics at the University of North Carolina at Chapel Hill. He is the Director of the Advanced Education Program in Graduate Prosthodontics and the Bone Biology and Implant Therapy Laboratory. Dr. Cooper, a Diplomate of the American Board of Prosthodontics, was recognized as the American College of Prosthodontists Outstanding Young Prosthodontist (1997) and serves as a member of its Board of Directors.

Fereidoun Daftary, DMD, MSD
Dr. Daftary received his dental education from the National University of Iran and has completed post-graduate training in prosthodontics at Boston University. He has served as Chair of the Department of Fixed Prosthodontics at USC. Dr. Daftary is a frequent lecturer at national and international meetings. He has also developed and patented many implant components. His current research focuses on improving implant esthetics and function. Dr. Daftary maintains a private practice limited to prosthodontics and implant dentistry in Beverly Hills, California.

Yoshihiro Goto, DDS, MSD
Clinical Assistant Professor of Advanced Prosthodontics at USC. He has received his dental degree from Nihon University in Tokyo, Japan, as well as USC. He has earned his Master Degree and Certificate of Advanced Training in Prosthodontics at the University of Washington. Dr. Goto has published multiple articles in national and international dental journals. He has also given numerous presentations nationally and internationally focusing on implants and esthetic rehabilitation. Dr. Goto also maintains a private practice limited to Implant and Prosthodontics reconstruction in Los Angeles, California.

Joseph Kan, DDS, MS
Dr. Kan completed his specialty training in Advanced Prosthodontics as well as the Master degree from the Advanced Implant Dentistry from Loma Linda University School of Dentistry (LLUSD). He is currently an Associate Professor in the Department of Restorative Dentistry in LLUSD where he also maintains a private practice limited to Prosthodontics and Implant Surgery. Dr. Kan is the recipient of the Best Research Award from the Academy of Osseointegration, as well as the Judson C. Hinckey Scientific Award from the Journal of Prosthetic Dentistry. He is on the Periodontology/Implantology Editorial Board of the Practical Periodontics and Aesthetic Dentistry.

Bach Le, DDS, MD, FICD
Assistant Professor, Division of Surgical Therapeutic and Bioengineering Sciences and Assistant Director, Oral and Maxillofacial Surgery, USC School of Dentistry and USC Medical Center. He is a Diplomate of the American Board of Oral & Maxillofacial Surgeons, the American Dental Society of Anesthesiologists, and the International Congress of Oral Implantologists. Dr. Le holds Fellowships in the International College of Dentists and the International Association of Oral & Maxillofacial Surgeons. Dr. Le maintains a private practice in Whittier, California.

Pascal Magne, DMD, PhD
Associate Professor and Don and Sybil Harrington Foundation Chair of Esthetic Dentistry, USC School of Dentistry. He obtained his postgraduate education in Prosthodontics and Operative Dentistry from the University of Geneva. He was awarded with major grants by the Swiss Science Foundation, the Swiss Foundation for Medical-Biological Grants and the International Association for Dental Research. He also spent two years as a full-time research scholar in Biomaterials and Biomechanics at the University of Minnesota. In 2002 he received his PhD degree. He is the author of the textbook Bonded Porcelain Restorations.
Baldwin W. Marchack, DDS, MBA
Dr. Marchack graduated from USC School of Dentistry and received his MBA from UCLA. Dr Marchack is the immediate past-President of the American Academy of Esthetic Dentistry, the Vice-Chairman of the Editorial Council for the Journal of Prosthetic Dentistry, serves on the Executive Council of the Pacific Coast Society for Prosthodontics and the Board of Councilors of the USC School of Dentistry. He is the author of numerous articles and has presented over 200 lectures nationally and internationally. Dr. Marchack maintains a private practice with a main emphasis on restorative and implant dentistry in Pasadena, California.

George Romanos, DDS, PhD
Dr. Romanos is Clinical Professor of Implant Dentistry at New York University. He has completed his Graduate studies of Dentistry at Athens University (D.D.S.); Clinical training in Periodontics from Berlin; Prosthodontics training in Freiburg; Oral Surgery and Implantology with Certificate in Oral Surgery, as well as Ph.D. on Immediate loading of dental implants from Frankfurt. He serves as a Board Member of several professional organizations and has published over 100 scientific publications and book chapters.

Arnold Rosen, DDS, MBA
Dr. Rosen’s background spans all arenas of patient care, administration, and academicia. His specialty from Boston University School of Graduate Dentistry and Sloan Kettering Memorial Cancer Institute was Prosthodontics and Maxillo-Facial Prosthetics and he has since added an MBA from Boston University. He has served as Director of the Dental Implant Center and founder of the Dental Implant Fellowship Program at Tufts University. He has also worked in telemedicine and teledental technologies as a consultant to the international medical forum in Argentina, and as co-founder of a teledentistry company and founder of Transcend, Inc.

Clark M. Stanford, DDS, PhD
Centennial Fund Professor in the Dows Institute for Dental Research and in the Department of Prosthodontics, University of Iowa. Dr. Stanford received his BS, DDS, Certificate in Prosthodontics and PhD in Cell Biology from the University of Iowa. Dr. Stanford is a member of several professional organizations and serves on their governing board and committees. He is a Fellow in the Academy of Prosthodontics. His research activities include bone and connective tissue responses to mechanical stimuli, bone mineralization and clinical studies evaluating material outcomes. He maintains a clinical prosthodontic practice within the College of Dentistry.

Richard M. Sullivan, DDS
Clinical Director for Nobel Biocare USA. He completed the two-year Harvard University Implant Dentistry Program and later provided implant placement, restoration and dental laboratory aspects of implant dentistry as a general dentist. Since 1990, he has worked with Nobel Biocare in several capacities, including a two-year relocation to Gothenburg, Sweden. Dr. Sullivan has provided osseointegration programs at universities and professional associations across the country. Dr. Sullivan is a Fellow of the Academy of Osseointegration and has served as Chairman of the Professional and Public Relations Committee.

Kurt Tennyson, CDT
Mr. Tennyson received his education in Dental Technology at Orange Coast College and Maxillofacial Prosthetic Training Program at UCLA. In 1979 he worked for Project Hope, establishing a Maxillofacial Program in Alexandria, Egypt. He spent 12 years with UCLA Maxillofacial / Hospital Dentistry Group and has received Lifetime Credential to teach Dental Technology. He owns and operates Excel Maxillofacial Prosthetic Laboratory. He is the president of the Tennyson Study Club. He lectures extensively nationally and internationally on the topic of dental implants.

Stephen Wallace, DDS
Dr. Wallace is a graduate of Boston University School of Graduate Dentistry with a certificate in Periodontics. He is Associate Professor at the New York University Department of Implant Dentistry. He is a Diplomate of the International Congress of Oral Implantology and a Fellow of the Academy of Osseointegration. He lectures at home and abroad on dental implantology and periodontics. He is the author of journal articles and textbook chapters on implantology and co-editor of sinus elevation textbook released in Italy. Dr. Wallace maintains a private practice limited to Periodontics in Waterbury, CT.

Homayoun H. Zadeh, DDS, PhD
Associate Professor and Chair of the Periodontology Section, USC School of Dentistry. Dr. Zadeh is a graduate of the USC School of Dentistry. He completed the advanced clinical education in Periodontology and earned his PhD degree in Immunology from the University of Connecticut. He is a Diplomate of the American Board of Periodontology. He serves as the editorial reviewer for several scientific journals, and chairs a Scientific Study Section of NIH. Dr. Zadeh also leads a research team, funded by the NIH. His clinical research interests involve studies on minimally-invasive surgery and tissue engineering. He is the Director of USC Periodontal and Implant Symposium and maintains a part-time private practice limited to Periodontology and Implants in Southern California.

Refunds are granted only if a written cancellation notification is received at least 21 days before the course. 50% of the tuition fee will be refunded if cancellation occurs within 14 days before this course. No refund is granted afterwards. A $50 fee is withheld for processing. For additional registrations, xerox this form and send.
