The focus of this course is sedation of the pediatric patient receiving dental care. The purpose is to prepare the participant to deliver safe and effective enteral (oral) moderate sedation to the patient under the age of 13 years. This course is designed to meet requirements for a pediatric enteral moderate sedation (OMS) permit in California and most other states.

Major topics to be discussed during the three days of the course include: the development of guidelines for pediatric OMS, physiology and psychology of the child, sedation techniques in children, including N2O-02, intranasal, intravenous and general anesthesia, oral moderate sedation including pharmacology and protocols, monitoring and record keeping, physical evaluation, medically compromised and special needs patients, and management of unintended consequences (sedation failures and oversedation). Issues of sedation in adult patients will also be discussed.

*All doctors enrolling in this course are REQUIRED to become Pediatric Advanced Life Support (PALS) providers. The PALS course will be presented on Saturday and Sunday, November 21 - 22, 2009. Certification will be provided by Coleman Education Opportunities (CEO).*

**Upon completion of this course participants should be able to:**

- Know the anatomic and physiologic differences between the child and adult
- Describe the indications, contraindications, advantages and disadvantages of inhalation sedation with N2O-02 in the pediatric patient
- Discuss the appropriate use of N2O-02 in combination with oral sedation
- Know the indications, contraindications, advantages and disadvantages of oral moderate sedation in the pediatric patient
- Name 5 orally-administered CNS-depressants recommended for use in pediatric OMS
- Describe the pharmacologic actions of these 5 drugs on the CNS, respiratory system, and cardiovascular system
- Outline the protocol for a pediatric OMS appointment
- Determine the maximum recommended dosage of local anesthetic agents in pediatric dental patients
- Describe the monitors employed during pediatric OMS
- Describe the record keeping required for pediatric OMS
- List the criteria for discharge from the dental office of the pediatric patient receiving OMS
- Diagnose and manage oversedation and the unconscious patient
- Describe the ASA Physical Status Classification System giving examples of each category
- Diagnose and treat the medical emergency situations mandated by the Dental Board of California
- Describe and understand the use of each of the emergency drugs and supplies mandated by the Dental Board of California
- Use oral moderate sedation effectively and safely in the pediatric dental patient.
