USC School of Dentistry
112 Years of Tradition and Excellence

USC School of Dentistry
Friday, February 27, 2009
Embassy Suites Sacramento:
Saturday, February 28, 2009
9:00 a.m. – 4:00 p.m.
This course presents the relevance and methodology for the classification, prevention and treatment of infectious diseases and developmental abnormalities affecting the gingival and periodontal tissues of children and adolescents.

Dentists may encounter all types of oral diseases and abnormalities that can affect the systemic and mental development of children and adolescents, including gingival and periodontal diseases. This course provides a comprehensive review on several aspects of gingival and periodontal infectious and developmental diseases in children and adolescents such as: relevance, diagnosis and treatment, sequential appearance of these diseases at various ages in the same individual, recognition of individuals, families and populations at risk, conservative approach to gingival recession, and the intimate connection between systemic conditions and the gingival and periodontal tissues. These topics will be discussed with an evidence-base review of the literature and multiple clinical examples.

This course will be held at USC School of Dentistry and repeated in Sacramento.
In Sacramento, this course will be held at:

Embassy Suites Sacramento
100 Capitol Mall
Sacramento, CA 95814
Steamboat Ballroom

Upon completion of this course you will be able to:

- Understand the significance of gingival and periodontal diseases in children and adolescents, and the concept of "preventive periodontics"
- Diagnose and treat gingival and periodontal infectious diseases and developmental abnormalities such as gingival recession in children and adolescents, independently, or with the cooperation of other Dental or Medical specialists
- Identify individuals, families, and populations at risk for these diseases
- Understand the intimate relationship between systemic, gingival, and periodontal conditions
