CONTINUING PROFESSIONAL EDUCATION
University of Southern California
A variety of clinical scenarios may present themselves, requiring complex prosthetic restoration. A key to success is careful planning and simplification of therapy, based on sound principles. A wide array of restorative options are available today. Selection of the appropriate prosthesis requires consideration of the patient’s anatomy; quantity and quality of available hard and soft tissues; the need for augmentation surgery; esthetic requirements; occlusal scheme; and the patient’s desires. The objective of this course is to review the fundamentals for prosthetic restoration of implants in patients. An evidence-based approach will be used to provide treatment options with a high degree of predictability. Practical solutions to common prosthetic problems will be provided.

This course is recommended for:

- Restorative dentists and surgical specialists who would like to acquire a more in depth and comprehensive understanding necessary for management of patients requiring complex implant reconstruction
- Allied professionals (Laboratory technicians, dental hygienists and dental assistants) who participate as members of the implant therapy team and would like to be more effective in their functions by enhancing their fundamental and practical knowledge

### Topics to be discussed:

- Prosthetic options for complex cases
- Treatment of fully-edentulous maxilla and mandible
- Treatment of compromised dentition requiring full-arch extraction
- Decision-tree for selection of fixed versus removable restoration
- Immediate and early loading
- Diagnostic tools: CT imaging, surgical guides
- Computer-assisted planning and implant positioning
- Immediate implant placement vs. staged implant placement
- Assessment of need and sequencing of implant site development techniques
- Implant impression techniques
- Screw-retained vs. cement-retained restorations
- Application of CAD/CAM in abutment and restoration fabrication
- Abutment selection guidelines
- Occlusal considerations and guidelines
- Provisional options and techniques
- Prosthetic complication and their management
- Dental materials used in implant restoration
- Laboratory techniques and procedures

### Hands-On Model Workshop

- Implant placement for full-arch case
- Implant-level impression
- Fabrication of full-arch immediate load fixed prosthesis

### Live Surgery Demonstration

- Implant placement for full-arch case
- Implant-level impression
- Fabrication of full-arch immediate load fixed prosthesis

*This course is suitable for clinicians with intermediate or advanced experience in implant dentistry.*
