Atraumatic Extraction and Minimally Invasive Implant Site Development

Module IA: 5 CE units (8:00 a.m. - 1:00 p.m.)
Module IB: 3 CE units (2:00 p.m. - 5:00 p.m.)

Fee: Include course materials, continental breakfast, lunch, and refreshments during breaks.

Registration Fees

Before July 15, 2009

Dentist:
Module IA: $275
Module IA & IB: $825

Auxiliary:
Module IA: $155
Module IA & IB: $595

After July 15, 2009

Dentist:
Module IA: $325
Module IA & IB: $895

Auxiliary:
Module IA: $195
Module IA & IB: $645

Please make checks payable and mail to:

USC School of Dentistry is an ADA CERP and ACDE recognized provider.
Bach Le, DDS, MD, FICD
Dr. Le is a Clinical Associate Professor, Division of Surgical Therapeutic and Bioengineering Sciences and Assistant Director, Oral and Maxillofacial Surgery, USC School of Dentistry and USC Medical Center. He is a Diplomate of the American Board of Oral & Maxillofacial Surgeons, the American Dental Society of Anesthesiologists, and the International Congress of Oral Implantologists. Dr. Le holds fellowships in the International College of Dentists and the International Association of Oral & Maxillofacial Surgeons. Dr. Le maintains a private practice in Whittier, California.

Implant site preservation and development is the concept of maintaining the volume and architecture of both the soft and hard tissues. It is critical to minimize tissue loss during extraction to conserve the natural tissue architecture for future implant placement. Tissues should be preserved and maintained in their original forms as much as possible from the time of tooth extraction to the placement of restoration. This concept is crucial to ensure tissue healing, patient comfort, esthetics and functionality of the final implant restoration. This course will highlight several techniques that facilitate a more esthetic, functional and predictable result in implant dentistry, starting with extraction. Discussion will focus on some of the most commonly asked questions in implant dentistry, such as should grafting be performed after tooth extraction? which is the best graft material to use? what type of interim provisional restorations to use in order to minimize tissue loss? and decisions regarding immediate implant placement versus delayed implant placement. This course is designed for the novice and advanced clinician and is the first in our series on implant site development and bone grafting. The hands-on portion will focus on minimally invasive extraction and grafting techniques and participants will practice on human cadavers.

SYNOPSIS

Testimonials

“Fantastic course! The instructors were fabulous!”
“Excellent - Thank you very much. This is a great course.”
“Nicely organized and well presented. Very useful!”
“Dr. Le loves to teach and is willing to review in detail for each student.”
“Encouraging!”

Course Objectives

- To review the minimally invasive tooth removal techniques and instrumentation
  - Remove broken and difficult teeth with minimal flap
  - Various incision and flap designs for optimal end results
- To describe the role of socket grafting
  - Literature and indications for grafting
  - What to look for in choosing a graft material
  - Technique
- To evaluate histomorphometric analysis of different graft materials
- To discuss the management of extraction sites with facial bony defects - “socket repair”
- To know how to manage the post-extraction site in order to minimize hard and soft tissue loss
- To discuss various interim provisional restorations for the implant site development
- To understand the pros and cons of immediate versus delayed implant placement
- To describe minimally invasive bone grafting techniques for the compromised implant site development
