Orofacial Pain Treatment:
Focus on Medications

Friday - Saturday • October 8 - 9, 2004 • 8:30 a.m. - 5:00 p.m.

14 Hours of Continuing Education

Glenn Clark, DDS, MS
Professor, Division of Diagnostic Sciences and Director of the Orofacial Pain and Oral Medicine Graduate Program and Center, USC School of Dentistry. Diplomate of the American Academy of Orofacial Pain.

Jack Broussard, DDS
Assistant Clinical Professor, Division of Diagnostic Sciences and Holder of the G. Donald Montgomery Professorship in Dentistry, USC School of Dentistry. Diplomate of the American Academy of Orofacial Pain.

Ana Lotaif, DDS, MS
Assistant Clinical Professor, Division of Diagnostic Sciences and Operations Manager of Orofacial Pain and Oral Medicine Clinic, USC School of Dentistry.

Topics to be covered:

- Issues of California drug law, the DEA/DOJ and using off-label prescriptions
- Advances in pharmacogenetics as a way of predicting drug-drug interactions and adverse drug reactions
- Treatment of chronic pain using behavioral, physical and surgical treatments
- Using an electronic medical record and an automated computer-patient interface for medical documentation
- Using a PDA-based drug program
- Using a pain diary and pain treatment agreements in your practice
- How to perform trigger point, botulinum toxin, and corticosteroid injections for pain and spasm

Upon completion you will be able to understand:

- Medications, Dentists and the Law: What can you prescribe?
- 10 Top medications used in an OFP Specific Treatment Center
- Metabolism of medications, including liver enzyme systems
- The various chronic pain diseases that appear in the orofacial region
- Non-pharmacologic therapies for OFP
- Pharmacogenetics and medication efficacy
- Current approaches for treating non-malignant chronic orofacial pain
- How to (a) conduct a myofascial examination; (b) perform therapeutic injections (trigger point, botulinum toxin and corticosteroids)

This two-day course will cover the medications used to treat chronic orofacial pain, including neurogenic, musculoskeletal, headache and uncommon pain disorders. To be able to treat patients with these problems, dentists must understand the underlying mechanisms of pain transmission, nerve injury and repair, sensitization, sympathetic pain maintenance and spontaneous ectopic pain generation. Dentists must be able to perform various analgesic blocks and sensory testing procedures as well as understand how these procedures combined with historical information allow a differential etiologic based diagnosis to be made. This course is divided into lecture hall presentations in the morning and demonstrations and workshops in the afternoon with specific case discussions at the end of the day.

This course is part of a series that are being provided by the faculty of the newly established USC Center for Orofacial Pain and Oral Medicine. For specific questions regarding this course, please contact Dr. Clark at gtc@usc.edu. For patient referrals, please call 213-740-3410.
